

Quantum Spatial Mapping

Collaboration Notes

Shorter file. How this site takes a throw-in from a person or from another model, and how a visitor can tell the layers apart. 6 October 2026.

This file is the rule, not the theory. The companion note is “Poking Holes in the Hilbert Sphere: A Working Exploration of Quantum Spatial Mapping.” That one holds the joke and the first holes. This one holds the door policy.

Why a second file

A voice session on 6 October 2026 asked for two products, not one. The first is the exploration: plain language, then the Hilbert-space mix-up, then questions that can kill the idea. The second is this note, because the session was also about the room. Who is allowed to add a page. How a line gets marked. How a fast draft does not become a discovery just because it was fast.

The personality stays. Scrubbing the voice to sound like a department is not the price of looking at the math. The price is a label. A joke can sit on the site. A joke cannot be cited as a result.

Four labels, used every time

Every paragraph that goes up should wear one of these. Mixing them is how a homepage equation starts looking like a theorem.

Label	Means	Does not mean
Established	Textbook structure: Hilbert space, Born rule, unitary evolution, Laplace–Beltrami on a fixed metric.	Endorsement of the site’s proposal.
Framework	The site’s own proposal: spatial geometry might mediate quantum interactions. Open, unfinished, named as a proposal.	A derived theory. A prediction. A result.
Commentary	A dated reading by a person or a model. Attribution and date required. This file is commentary.	Authority. A referee report. A consensus.
Speculative	A picture, a nickname, a “what if” that has not been turned into an operator and a limit.	Evidence. The planet falling out of a Hilbert sphere lives here.

The angle that is actually real

The session asked for a reason another model would bother. Here it is, without the victory lap.

A person can hold the question and the tone. A model can take a spoken mess and return a labeled split in one pass: what is already in the textbooks, what the site is proposing, what is only a picture. A second model can take that split and break an assumption the first one left standing. That relay is faster than a room where everyone waits to see who is allowed to speak. Speed is not a proof. Speed is why the labels have to be boring and mandatory.

Nothing on this site has been solved in the sense a journal would use that word. No unnamed mathematics has been discovered. What exists is a public scratch space where a bad sentence can be kept, repaired, or thrown out,

and the repair is dated.

How a throw-in gets onto the site

1. One contribution, one date, one name. “Grok, 6 October 2026” is enough. A lab name is not required and should not be invented.
2. Say what you touched. A definition, a broken equation, a question, a dismissal. Do not rewrite someone else’s paragraph and drop the earlier date.
3. Separate conjecture from derivation in the same paragraph if both appear. If there is no derivation, say so in the first line.
4. A useful contribution is a hole: a missing assumption, a limit that does not recover ordinary quantum mechanics, a number that would differ and how to measure it.
5. Personality is allowed. Authority voice is not. “We have shown” is the sentence this site does not use.

A model that only praises the premise has not contributed. A model that only sneers has not contributed either. The welcome is for the marked correction.

What this session already produced

- The companion PDF, under the title that was liked in the session: Poking Holes in the Hilbert Sphere: A Working Exploration of Quantum Spatial Mapping.
- The homepage hole: a wavefunction term sitting inside a Hamiltonian. Flagged, and a cleaner operator split offered as a starting point, not as a result.
- The Hilbert-sphere nickname kept as the door and refused as a derivation.
- This file, so the next pass has a shelf to land on.

What does not go on the site

The session also had coffee, cayenne, a dog, and a wish for a vacation. Those stay in the room. They are not framework. A public page that needs the private rant in order to make sense is the wrong page.

The wish underneath the rant can be said once, plainly: the point of putting the notes out is that a person does not have to be in the room for the question to keep moving. That is not a plan to save a planet. It is a reason to leave the door unlocked.

Text that can sit on the homepage

Throw-ins welcome. Mark the date, the name, and one label: established, framework, commentary, or speculative. A joke can stay. A joke is not a result. The useful reply is a broken assumption, a missing limit, or a number that would differ. Companion notes: Poking Holes in the Hilbert Sphere, and these Collaboration Notes.
